

ASSIGNMENT 7

After lots of trial and errors I was able to finish to create this Yahtzee game. It was difficult for me at beginning as I have never played or interact with this game before. Fortunately I have found variety types of Yahtzee game through online and tried to combine in single index.html file as we have did in my previous assignment by a PHP file. These are the steps I followed to make this game:

Write code to generate a random set of dice rolls and display them to the user.

1. Implement the game logic, including scoring and player turns.
2. Allow the user to input which dice they want to keep and which they want to reroll.
3. Display the final score at the end of the game and give the option to play again.
4. Test my code thoroughly to make sure it works as expected.
